UWIM – blockchain made for you

UWIM is a blockchain platform where any person or company can easily create tokens and smart contracts through a constructor without technical knowledge and the involvement of specialists. A token owner receives tools decreasing costs and time, which makes blockchain technology accessible and clear for everyone.

Unique register of tokens

Each created user token in the blockchain has a card with the data that is also a subject to decentralization (each subsequent update is recorded in the blockchain and remains unchanged throughout its existence). The token can be attached to the identity of the team owner and contains all information about its applicability and trade offers.

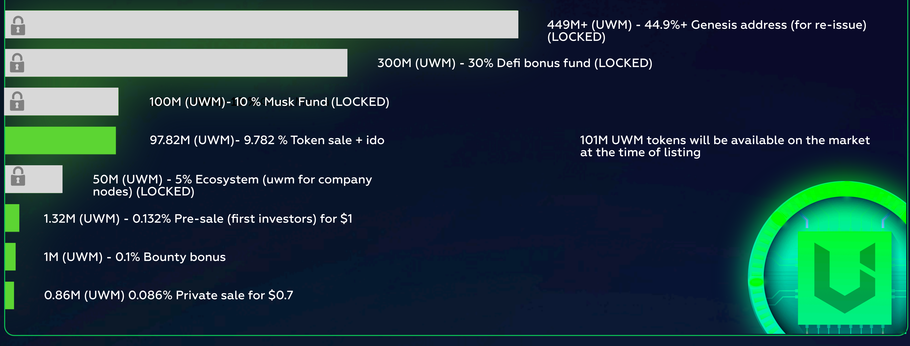
Accreditation

Accreditation is a centralized platform function that allows potential investors to understand what information about a token has been verified.
The hash of the verification result is written to the blockchain, and the platform marks the data with its signature (verifies it), which is impossible to falsify. Users see the data transparency about the token owner and that all information is provided and reliable.
The user does not see specific data but sees the verification checkbox.

Decentralized exchange

The exchange between tokens is carried out instantly in an automatic mode without the people participation through a smart exchange contract DEFI (decentralized exchange).
A "liquidity pool", which determines the exchange ratio, is created for each pair of main and custom tokens.
The token holder can:

- Determine the initial rate by filling the liquidity pool first
- Issue coins in proportion to all its participants
- Set commission values for all new transactions



UWIM tokens types

Personal – a token attached to your personality. If your idea of application (startup project, business, blog, etc.) is personally yours without the partners or other third parties presence with a stake. For example, an individual, a blogger, an entrepreneur, an artist, a solo singer, etc.

Team – organization form for token creation in case your business, project, group, etc. consists of two or more people. You need this token if you are going to attract investment as a team, implement a business idea or already have a business. Perhaps you are a musical group, a development team, etc.

Blockchain, addresses, nodes, consensus

UWIM has its own build and blockchain architecture to support a large number of custom tokens and smart contracts. We are NOT a fork of Bitcoin and Ethereum or any other fork.

Each ecosystem address contains three "sub-addresses" with the corresponding prefixes:

_uw - Main address for tokens storage
_sc - Address for smart contract attachment
_nd - Address for connection to its own node

All decisions are made on the basis of a modified POS consensus that requires confirmations of at least 66% of the validator coins total number and at least 51% of the validators number. There can be three types of nodes in UWIM:

- Full validator node - makes decisions in consensus
- Full node - stores information about all blockchain operations
- Light node - has the ability to send operations via API

UWIM tokens standards

My - the basic token intended for personal use to accumulate and popularize your personality or team. I

Drop - a loyalty program token, it is your gratitude for actions of your friends, subscribers or business customers. This standard token does not have a specific value and can only be transferred.

Thx - thank you token, thanks from your audience to you or your team. The token is mostly used for donation.

StartUp - your idea token, which allows you to get support for your undertaking.

Business - existing business or project token that allows you to get support for your business development.

Trade – a trade token that has already passed the stages of development and has a public DEFI exchange offering.

Payable - a token that allows you to get additional rewards from its holder in addition to its possession. This token has already passed the stages of development and has a public DEFI exchange offering.

Support for new tokens

A special bonus program from UWIM created to support new platform members. Bonus conditions are the same for every new member.
At the start of the project, 300 million coins were allocated to a separate smart contract for rewards. One cannot withdraw coins from the separate smart contract. UWM coins are additionally issued to the liquidity pool of each token, which allows to take advantage of the tokens created in the first few years of the platform's existence.

About the "Musk" Fund

The project team has always been excited with the idea of supporting startups aimed at the world and humanity development.

100 million coins blocked on a smart contract have been allocated in advance for the fund.

The UWIM team nominates at least 10 well-known experts from around the world who will evaluate the brightest initiatives of the platform participants.
Any team can create a token, submit their project and fill in all the relevant details. Each project that has submitted an application will receive an assessment of independent experts. Based on the results of the assessment and experts voting, the project will be assigned a special status, and a nominated person will receive a reward in the form of UWM (the main unit of the platform) depending on the assigned status.
We believe that this support is simply necessary for new projects, which in the long term are able to benefit the entire world.

Affiliate program

Affiliate charges for a referral link:

from 100 uwm	3% (User)
from 500 uwm	4% (Pro)
from 1,000 uwm	5% (Platinum)
from 10,000 uwm	8% (Diamond)

Partner statuses:

from 100 uwm	+1% (User)
from 500 uwm	+2% (Pro)
from 1,000 uwm	+3% (Platinum)
from 10,000 uwm	+5% (Diamond)

For each transaction made by a referral, their partner receives a reward from the system in the amount of: Status +% of the transaction. The terms of the affiliate program do not apply to all types of gift tokens.
50 million coins have been allocated in advance for the affiliate program smart contract (the total number of bonuses that all platform participants can receive).
